1. Executive Summary

Kastovia Holdings LLC is a registered limited liability digital technology company operating from Tbilisi, Georgia. The company is structured around two complementary business lines: B2B digital technology services and proprietary digital product development.

The B2B services business focuses on AI-driven workflow automation, Generative Engine Optimization (GEO), and IT integration consulting for corporate clients, primarily in EU and US markets. The product business focuses on developing and monetizing in-house mobile applications as owned digital assets.

This document summarizes the company activity, expected revenue streams, operating model, bank account use, and risk profile for institutional review.

3. Business Model

3.1 B2B Digital Technology Services

Kastovia provides consulting and implementation services to organizations that need practical digital leverage. Work may include workflow discovery, automation design, AI-assisted process implementation, AI search and answer-engine readiness, and integration between business platforms.

- AI-driven workflow automation for repetitive internal processes.
- Generative Engine Optimization for company, service, and content discoverability in AI-assisted search environments.
- IT integration consulting for connecting tools, improving data flow, and reducing manual reconciliation.
- Operational dashboards, documentation, and implementation support for business teams.

3.2 Proprietary Digital Products

The company also develops in-house mobile applications. These products are intended to be owned digital assets that can generate revenue through subscriptions, in-app purchases, advertising, licensing, partnerships, or other app-based monetization models, depending on the product.

4. Services And Deliverables

AI Workflow Automation

Process review, automation mapping, AI-assisted routing and drafting, internal workflow implementation, testing, and handover.

Generative Engine Optimization

Entity structuring, business information architecture, website copy support, AI-answer readiness, and authority signal planning.

IT Integration Consulting

Systems audit, tool connection planning, data synchronization, dashboards, and implementation support.

Digital Product Development

Mobile app concepts, UX flows, product validation, analytics planning, monetization structure, and launch support.

5. Revenue Model

Kastovia expects to generate revenue from a combination of service-based and product-based sources. The precise mix may evolve as client work and proprietary mobile applications develop.

- Project-based consulting and implementation fees.
- Fixed-scope workflow automation, GEO, and IT integration engagements.
- Monthly retainers for ongoing advisory, maintenance, optimization, and support.
- Mobile application revenue, including subscriptions, in-app purchases, advertising, licensing, or product partnerships where applicable.
- Strategic product or technology consulting for international clients.

6. Target Clients And Markets

The company is positioned for international B2B clients, particularly organizations based in the European Union and the United States. Target clients may include small and mid-sized companies, professional service firms, digital businesses, operational teams, growth teams, and leadership groups seeking better automation, discoverability, or technology infrastructure.

7. Expected Bank Account Activity

The business bank account is expected to support ordinary commercial activity connected to digital technology services and product development.

Expected incoming payments

- Client payments for consulting, implementation, retainers, and digital services.
- Payments from app stores, advertising platforms, software marketplaces, or product partners.
- International transfers from EU, US, and other corporate clients.

Expected outgoing payments

-
- Payments to contractors, developers, designers, consultants, and professional service providers.
 - Software subscriptions, hosting, cloud infrastructure, API usage, analytics tools, and security services.
 - Marketing, domain, website, app store, legal, accounting, tax, and administrative expenses.
 - Business travel, communications, and ordinary operating expenses.

8. Compliance And Risk Positioning

Kastovia Holdings LLC is positioned as a digital technology company. The planned business activity is focused on software consulting, workflow automation, IT integration, GEO advisory, and mobile application development.

The company does not present itself as a bank, payment institution, investment firm, broker, crypto exchange, gambling operator, adult entertainment business, weapons business, or regulated financial intermediary. If future activities require licenses, approvals, or additional compliance review, the company should address those requirements before engaging in such activity.

Operational controls

- Use written scopes, invoices, and contracts for client engagements where appropriate.
- Keep records of customer payments, supplier invoices, and business expenses.
- Maintain separation between company funds and personal funds.
- Use the account for legitimate business expenses and revenue connected to the stated business model.

9. Use Of Bank Of Georgia Business Account

The requested business account would be used to receive revenue, pay vendors, manage operating expenses, support product development, and maintain financial records for the company. A Georgian business account is suitable because the company is registered in Georgia and operates from Tbilisi while serving international digital technology markets.

10. Management Statement

Kastovia Holdings LLC is intended to operate as a legitimate digital technology company with a focus on B2B AI-enabled workflow automation, GEO, IT integration consulting, and proprietary mobile application development. The company seeks banking support for ordinary business operations, international client payments, supplier payments, and product development expenses.
